

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1 Claim 1. *(Currently amended)* A computer software product that includes a medium readable
2 by a processor, the medium having stored thereon a set of instructions for creating and
3 implementing an architecture for designing a job training program for an organization,
4 comprising:

5 a) a first sequence of instructions which, when executed by the processor,
6 causes said processor to provide a set of analysis templates prompting a user for
7 information for assessing the organization's needs, capacities, and resources, and for
8 saving the user's responses to said templates in serialized objects;

9 b) a second sequence of instructions which, when executed by the processor,
10 causes said processor to provide a set of design templates based upon a rule-based
11 system analysis of the user's responses to said analysis templates which prompt the
12 user for information tailored to a web-based instructional course for the organization,
13 and causes said processor to receive the user's responses to said templates, and to store
14 the user's responses in serialized objects, the second sequence including instructions
15 for (a) developing and sequencing objectives, (b) specifying instructional strategies
16 and methods, (c) evaluating instructional objectives, and (d) examining organizational
17 issues; and

18 c) a third sequence of instructions which, when executed by the processor,
19 causes said processor to parse the serialized objects, provide the user with an outline

20 tree of a web-based instructional course and with nodes having content supplied by the
21 serialized objects, accept user editing of the outline tree and natural language editing
22 of the nodes, and generate a web application implementing a job training course from
23 the edited outline tree and nodes, the third set of instructions further including a set of
24 instructions capable of producing a web application job training course permitting
25 multiple learners to access the course synchronously and asynchronously for
26 collaborative job training.

1 Claim 2. *(Original)* The computer software product according to claim 1, further comprising
2 a fourth sequence of instructions which, when executed by the processor, causes said
3 processor to provide a set of guidelines for carrying out an analysis phase, a design phase, a
4 development phase, an implementation/delivery phase, and an evaluation/maintenance phase
5 for assessing the organization's job training and performance needs, the guidelines being
6 accessible by said first, second and third sets of instructions.

1 Claim 3. *(Original)* The computer software product according to claim 1, wherein said first,
2 second, and third sets of instructions are capable of being deployed on a computer network
3 and of being edited by multiple users in both synchronous and asynchronous modes in order
4 to produce a web application for job training and performance by collaborative effort.

Claim 4. *(Canceled)*

1 Claim 5. *(Original)* The computer software product according to claim 1, wherein said third
2 set of instructions further includes a set of instructions for permitting a user to supplement
3 textual material with graphics files, audio files, video files and multimedia files.

1 Claim 6. *(Original)* The computer software product according to claim 1, wherein said third
2 set of instructions further includes a set of instructions for permitting a user to supplement
3 course material with tests, including user supplied questions and designations of correct
4 answers, points assignments to the questions, standards for acceptable course progress, and
5 feedback for learners.

1 Claim 7. *(Original)* The computer software product according to claim 1, wherein said third
2 set of instructions further includes at least one application program interface function for
3 integrating a course produced by said third set of instructions with a learning management
4 system.

1 Claim 8. *(Original)* The computer software product according to claim 1, wherein said first
2 set of instructions further includes instructions for:

- 3 (a) needs assessment;
- 4 (b) needs analysis;
- 5 (c) education analysis;
- 6 (d) learning analysis;
- 7 (e) job analysis;
- 8 (f) task analysis;

- 9 (g) learner analysis;
- 10 (h) resource analysis; and
- 11 (i) existing materials analysis.

Claim 9. *(Canceled)*

- 1 Claim 10. *(Currently amended)* An automated job training and performance tool for
2 designing a job training program for an organization, comprising:
- 3 a) a computer having a microprocessor, an area of main memory for executing
4 program code under the direction of the microprocessor, and a disk storage device for
5 storing data and program code;
 - 6 b) data input means for entering data input cognizable by said microprocessor;
 - 7 c) a software program code stored in said disk storage device and executing in
8 main memory under the direction of said microprocessor, the software program
9 including:
 - 10 i) analysis template means for providing a set of analysis templates
11 prompting a user for information for assessing the organization's needs,
12 capacities, and resources, and for saving the user's responses to said templates
13 in serialized objects;
 - 14 ii) design template means for providing a set of design templates based upon a
15 rule-based system analysis of the user's responses to said analysis templates which
16 prompt the user for information tailored to a web-based instructional course for the
17 organization, and causes said processor to receive the user's responses to said

18 templates, and to store the user's responses in serialized objects, the design template
19 further including means for: (a) developing and sequencing objectives, (b) specifying
20 instructional strategies and methods, (c) evaluating instructional objectives, and (d)
21 examining organizational issues; and

22 iii) web author means for parsing the serialized objects, providing the
23 user with an outline tree of a web-based instructional course and with nodes
24 having content supplied by the serialized objects, accepting user editing of the
25 outline tree and natural language editing of the nodes, and generating a web
26 application implementing a job training course from the edited outline tree and
27 nodes the web author means including means for producing a web application
28 job training course permitting multiple learners to access the course
29 synchronously and asynchronously for collaborative job training.

1 Claim 11. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said software program code further comprises means for providing a set of guidelines
3 for carrying out an analysis phase, a design phase, a development phase, an
4 implementation/delivery phase, and an evaluation/maintenance phase for assessing the
5 organization's job training and performance needs, the guidelines being accessible by said
6 analysis template means, said design template means and said web author means.

1 Claim 12. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said analysis template means, said design template means, and said web author
3 means are capable of being deployed on a computer network and of being edited by multiple

- 4 users in both synchronous and asynchronous modes in order to produce a web application for
5 job training and performance by collaborative effort.

Claim 13. *(Canceled)*

- 1 Claim 14. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said web author means further includes means for permitting a user to supplement
3 textual material with graphics files, audio files, video files and multimedia files.

- 1 Claim 15. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said web author means further includes means for permitting a user to supplement
3 course material with tests, including user supplied questions and designations of correct
4 answers, points assignments to the questions, standards for acceptable course progress, and
5 feedback for learners.

- 1 Claim 16. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said web author means further includes at least one application program interface
3 function for integrating a course produced by said web author means with a learning
4 management system.

1 Claim 17. *(Original)* The automated job training and performance tool according to claim 10,
2 wherein said analysis template means further includes means for:

- 3 (a) assessing needs;
- 4 (b) analyzing needs;
- 5 (c) analyzing education;
- 6 (d) analyzing learning;
- 7 (e) analyzing jobs;
- 8 (f) analyzing tasks;
- 9 (g) analyzing learners;
- 10 (h) analyzing resources; and
- 11 (i) analyzing existing materials.

Claim 18. *(Canceled)*

1 Claim 19. *(Original)* A computer software product that includes a medium readable by a
2 processor, the medium having stored thereon a set of instructions for creating and
3 implementing an architecture for designing a job training program for an organization,
4 comprising:

- 5 a) a first sequence of instructions which, when executed by the processor,
6 causes said processor to provide a set of analysis templates based upon rules-based
7 systems prompting a user charged with designing and developing the job training
8 program for the organization for information for assessing the organization's needs,
9 capacities, and resources, and causes said processor to receive the user's responses to

10 said templates in serialized objects, and compiles, weights, calculates, filters/sorts the
11 user's responses;

12 b) a second sequence of instructions which, when executed by the processor,
13 causes said processor to provide a set of design templates based upon a rule-based
14 systems for the user's responses to said analysis templates and to said design templates
15 which prompt the user for information tailored to delivery systems and instructional
16 strategies for courses for the organization, and causes said processor to receive the
17 user's responses to said templates in serialized objects and compiles, weights,
18 calculates, filters/sorts the user's responses in order to produce a design plan for
19 courses; and

20 c) a third sequence of instructions which, when executed by the processor,
21 causes said processor to parse the serialized objects, provide the user with an outline
22 tree of a web-based instructional course and with nodes having content supplied by the
23 serialized objects, accept user editing of the outline tree and natural language editing
24 of the nodes, and generate a web application implementing a job training course from
25 the edited outline tree and nodes.
